Hence it was often supposed that the word *misprision* itself expressed the sense of 'failure to denounce' a crime This imagined sense Sir E. D. D.)

1. Used as a title of courtesy prefixed to the surname or Christian name of a man (not entitled to be addressed as 'Sir' or 'Lord'), and to designations of office or occupation

The word in mod. use may be best described as the oral equivalent of the written prefix MR (q v in its alphabetical place). In writing, the unabbreviated form is now used only with more or less of jocular intention, in a passage like quot. 1854 in d, most persons would now write 'Mr' (with inverted commas).

1. Originally, a Flemish copper coin of very small value, according to some early Flemish writers, worth ½ of a Flemish penny, though other, chiefly smaller, values are also mentioned In Eng. use mainly as a proverbial expression for an extremely small unit of money value. In books of commercial arithmetic in 16-17th c. it commonly appears as the lowest denomination of English money of account, usually $\frac{3}{11}d$, but sometimes $\frac{3}{44}d$, and sometimes $\frac{1}{192}d$, it is, however, unlikely that the word was ever in Eng mercantile use. From the 14th c. *mite* has been the usual rendering (though the Wyclif versions have 'mynutis') of L *minūtum* (Vulg.), Gr λεπτόν in Mark xii 43, where two 'mites' are stated to make a 'farthing' (Gr. κοδράντης, L *quadrans*); hence the word is now popularly taken as equivalent to 'half-farthing'.

b. *Eccl.* A head-dress forming part of the insignia of a bishop in the Western Church, and worn also by certain abbots and other ecclesiastics as a mark of exceptional dignity. In its modern form, it is a tall cap, deeply cleft at the top, the outline of the front and back having the shape of a pointed arch; the material has usually been white linen or satin, embroidered and often jewelled; but mitres of gold or silver have also been used.

The application of *mitra* in med.L to the episcopal head-dress was doubtless suggested by its occurrence in the description of the attire of the Jewish high-priest. (See a)

In the Anglican church after the Reformation, the mitre, though theoretically part of the episcopal insignia, was seldom actually worn except at coronations down to that of George III In recent times some bishops have revived its use on special ceremonial occasions.

Possibly there may be a reference to the early form of the episcopal mitre, which had a vertical band bisecting a rectilinear angle at the top]

1. In Joinery and other mechanical arts: A joint (also *mitre-joint*) in which the line or plane of junction makes an angle of 45° with the side of each of the two pieces joined, so that the adjacent sides meet in a right angle, the shaped end or edge of a piece of material intended to form such a joint with another; an angle or slope of 45°. C. *adj* = MORE *a.*

[In OE. the construction of *má* with a partitive genitive (see B 1, 2) was sometimes inconvenient, because the sb which was felt to be virtually the subject or object of the verb, or the regimen of the prep, did not show the nature of this relation by its inflexion Hence the genitive was occas replaced by the case in which the sb would have stood if *má* had been absent, or (to express the same thing in another way) the sb was placed in apposition with *má*. In this way *má* became practically an indeclinable adj]

Mock (mɒk), *v.* Forms: 5 **mokken, moke, mocque**, 5-6 **mokkyn, mok**, 5-7 **mocke**, 6- **mock**. [ME. *mokken, mocque*, ad. OF. *mocquer* (F. *moquer*) to deride, jeer, a northern dialect form corresp. to the synonymous Pr. *mochar*, It. *moccare*.

According to some scholars, the word represents a popular L. **muccāre* to wipe the nose (whence F. *moucher*, It. *moccare*), f. **mucc-us* (class. L. *mūcus*, see MUCUS). With the OF. (whence the Eng.) transitive use, cf. L. *ēmungĕre* to wipe the nose, to cheat. The reflexive use (the only one in mod. Fr.) *se moquer de quelqu'un*, may originally have denoted the derisive gesture imitative of the movement of wiping the nose. In mod. Provençal, according to Mistral, *mouca* means 'to wipe the nose', 'to strike on the nose', while *se mouca* = F. *se moquer*, and *moucado* means 'a blow on the nose', 'a humiliation'.

Another hypothesis, less plausible semasiologically, would connect the word with Ger. dial. *mucken* to growl, grumble, OHG. *wmuccazan* 'mutire' (mod. G. *mucksen* to grumble).]

1 The quality or fact of being modal. Also, a modal quality or circumstance, the modal attributes of something; †a question or point relating to mode, manner, or method, and not to substance. Now *rare.*

b. In Kantian and subsequent use, that feature of a judgement which is defined by the class in which it is placed when judgements are classified into problematic, assertory, and apodictic.

This is a development of the older sense 2 a; the distinctive features of 'problematical' and 'apodictic' judgements being 'modalities' in the earlier sense, the term was extended to apply also to that of 'assertory' judgements. In Kant's classification 'the Categories of modality' are those of possibility and impossibility, existence and non-existence, necessity and contingency, the term is coordinate with Quantity, Quality, and Relation

1836 *Penny Cycl* VI 368/1 These Categories consist of four primordial classes 1 quantity, 2 quality, 3 relation, 4 modality; each class containing three Categories 1884 tr. *Lotze's Logic* 53 What modality have such sentences as these, '*S* will be *P*', '*S* ought to be *P*', '*S* may be *P*', '*S* has been *P*'? No one of them affirms reality, but the unreal which is past in the last is something quite different from that which is permitted, enjoined, or future in the others If all these shades of meaning had been taken into account, the forms of modality might have been correspondingly increased in number

3. *Civil Law* 'The quality of being limited as to time or place of performance, or, more loosely, of being suspended by a condition said of a promise' (*Cent Dict.* 1890)

3 *Physics* and *Mech.* A constant indicating the relation between the amount of a physical effect and that of the force producing it

Modulus of elasticity: originally applied by Young to the quantity by means of which the amount of longitudinal extension or contraction of a bar of a given material, and the amount of the tension or pressure causing it, may be stated in terms of each other. Now used in a wider sense (see quot 1877).

1807 T YOUNG *Lect Philos* XIII I 137 According to this analogy, we may express the elasticity of any substance by the weight of a certain column of the same substance, which may be denominated the modulus of its elasticity. *Ibid* II. 66 It may be shown that every small change of form is propagated along an extended chord with a velocity equal to that of a heavy body falling through a height equal to half the length of a portion of the chord, of which the weight is equivalent to a force producing the tension, and which may be called the modulus of the tension 1824 TREDGOLD *Strength Cast Iron* 251 The measure of the power of a body to resist impulsion, that is, the modulus of resilience. 1843 MOSELEY *Mech. The OF *moire*, the name of some textile fabric mentioned by Chrestien of Troyes (12th c.), is believed to be unconnected with the modern word]

Originally a kind of watered mohair; afterwards, any textile fabric (but usually silk) to which a watered appearance is given in the process of calendering; a watered or clouded silk.

Moire antique, explained by Fr. lexicographers to mean a watered silk of large pattern, is in Eng. use practically synonymous with *moire*, which is apprehended as a shortened form

b. Applied, with qualifying words, to certain functions serving as the measure of some mechanical effect the quantity of which depends on two different factors.

Thus the *moment of a force or a velocity* about a point is the product of the length of the directed line representing the force or the velocity, multiplied by the length of the perpendicular from the point. The *moment of a couple* is the product of either of the two equal forces into the length of the arm The *moment of inertia* of a body about any axis, is the sum of the products of the mass of each particle of the body into the square of its least distance from the axis *Moment of momentum* of a rotating body is the product of momentum into the distance from the axis

1830 KATER & LARDNER *Mech* X 135 The moment of a force is therefore found by multiplying the force by its leverage *Ibid.* 137 The product of the numerical expressions for the mass of the body and the square of the radius of gyration has been called the moment of inertia. 1858 RANKINE *Man Appl Mechanics* 22 The *moment* of a couple means the product of the magnitude of its force by the length of its arm. *Ibid.* 308 This is called the *bending moment* or *moment of flexure* of the beam at the vertical section in question

NEWMAN *Gram Assent* I. iv 49 But of the Supreme Being it is safer to use the word 'monad' than unit.

2. An ultimate unit of being, an absolutely simple entity.

Chiefly used with reference to the philosophy of Leibniz (1646–1716), according to which the universe of existence consists of entities without parts, extension, or figure, and possessing, in infinitely various degrees, the power of perception. Those among these 'monads' which have the perceptive power in the higher degrees are souls; the rest are formed in the view of the percipient mind into aggregates, which constitute bodies. The term was adopted by Leibniz from Giordano Bruno (*cf.* 1600), with whom the 'monad' has the twofold aspect of a material atom and an ultimate element of psychical existence.

1748 HARTLEY *Observ Man* II. i 27 No Sensation can be a Monad, inasmuch as the most simple are infinitely divisible in respect of Time. 1785 REID *Intell Powers* III. iv 345 A person is something indivisible, and is what Leibnitz calls a monad. 1856 SIR B. Monism (mǫ̊ nɪz'm). [ad. mod.L. *monism-us*, f Gr *μόνος* single : see -ISM.]

1. *Philos* A metaphysical system based on the assumption of a single ultimate principle or kind of being instead of two or more : opposed to DUALISM and PLURALISM in various applications.

a The doctrine that only one being exists.

1862 F. HALL *Hindu Philos Syst* 160 To the Vedántins the establishment of monism, or non-duality, is most essential They wish to make out the soul to be Brahma, and the world to be false, whence it would follow, that Brahma solely is true, and that nought but him exists

b. A general name for those theories which deny the duality (i. e the existence as two ultimate kinds of substance) of matter and mind.

Thus materialism and idealism or spiritualism are both species of monism, the name, however, is often applied specifically to a third variety, viz the doctrine that physical and psychical phenomena are alike manifestations of a reality which cannot be identified with either matter or mind.

1876 tr *Haechel's Hist Creat* I. II 35 The Monism here maintained by us is often considered identical with Materialism 1887 *Encycl Brit.* XXII. 564/1 Until dualism had been thought out, as in the Peripatetic school, it was impossible that monism (or at any rate materialistic monism) should be definitely and consciously maintained 1898 ILLINGWORTH *Div Imman* III. 72 Monism started from the physical side, from analysis of the cerebral conditions of thought

c The doctrine that there is only one Supreme Being, as opposed to the belief in a Good and an Evil Principle as co-ordinate powers

1872 MORRIS tr *Ueberweg's Hist Philos* I 334 Against the dualism of the Manichæans . Augustine defends the monism of the good principle.

In accordance with its etymology, *monachus* originally meant a religious hermit or solitary, but was from an early period applied to cœnobites, and this eventually became the ordinary use]

1. A member of a community or brotherhood of men living apart from the world under the vows of poverty, chastity, and obedience, according to a rule (characteristic of the particular order), and devoted chiefly to the performance of religious duties and the contemplative life. The different orders of monks are distinguished by habits of various shapes and colours (cf b)

In England, before the Reformation, the term was not applied to the members of the mendicant orders, who were always called *friars*. From the 16th c. to the 19th c, however, it was usual to speak of the friars as a class of monks In recent times the distinction between the terms has been carefully observed by well-informed writers In Fr and Ger the equivalent of *monk* is applied equally to 'monks' and 'friars'

The word properly belongs to Christian use, but is sometimes applied to persons of other religions (e. g Moslems, Buddhists)

1. A seasonal wind prevailing in southern Asia and especially in the Indian Ocean, which during the period from April to October blows approximately from the south-west, and from October to April from the north-east, the direction being dependent upon periodic changes of temperature in the surrounding land-surfaces

In the 16–17th c. the spelling *moneth* was almost universal.]

A measure of time corresponding to the period of revolution of the moon.

1. Any one of the twelve portions into which the conventional year is divided. (When not otherwise determined by the context, the reference is to the 'months' inherited by Western civilized nations from the Romans, and known by the names January, February, etc.) More explicitly *calendar month*, less commonly † *calendary, civil, political, usual month* (for illustrations of these designations see under the adjs.).

The primitive calendar month of ancient nations began on the day of new moon or the day after, and thus coincided (except for fractions of a day) with the synodical month (see 2). Among many peoples of antiquity, however, it was from a very early period found desirable that the calendar year should contain an integral number of the smaller periods used in ordinary reckoning. Hence the true 'months' were superseded by a series of twelve periods each having a fixed number of days (on the average one-twelfth of the number in the calendar year), and thus having no relation to the changes of the moon, but this artificial period continued to bear the name of 'month'. The systems according to which the reckoning by months was brought into relation with that by years were very various. In the Julian calendar, the months in leap year had alternately 31 and 30 days, while in other years February had only 29 instead of 30. This symmetrical arrangement was under Augustus broken up by the transference of a day from February to August, and of a day from September and November to October and December respectively, producing the system now in use.

2. *Astr.* **a.** (In full *Lunar month*.) The period in which the moon makes a complete revolution relatively to some point, either fixed or moveable.

There are thus several species of lunar month, as the time of the revolution is different according to the point with regard to which it is reckoned. Usually the term denotes the *synodical month*, i.e. the period from one new moon to the next, the length of which is 29 days, 12 hours, 44 minutes, 2·7 seconds. The other kinds of lunar month (the lengths of which are all between 27 and 28 days) are the *anomalistic, sidereal, tropical*, and *nodical month*: see those adjs.
